

# Product Portfolio 2021

Designer and Manufacturer of Scientific Instruments Since 1985

[www.sciencetech-inc.com](http://www.sciencetech-inc.com)

Sciencetech strives to maintain our long term commitment to research and development over a broad spectrum of industries and applications by designing and manufacturing solar simulators and optical spectroscopy instruments.

# Main Lines of Equipment

Research Grade Light Sources

Solar Simulators

High Quality  
I-V Measurement System

High Quality QE  
Measurement

Tunable Light Sources

Modular Spectroscopy

FTIR Spectroscopy

Custom Solutions

SCIENCETECH

# Research Grade Light Sources

# Research Grade Light Sources

## Xenon Arc Lamp

- Operational wattages : 75W – 6.5kW
- Collimated or focused beam output
- Broadband light emission from deep UV to IR

## Deuterium Lamps

- Operational wattages : 30W – 500W
- Collimated or focused beam output
- Ideal for high intensity deep UV emission

## QTH Lamps

- Wattages from 50W– 2000W
- Highly stable light output
- Ideal for applications in VIS and IR emission

SCIENCETECH

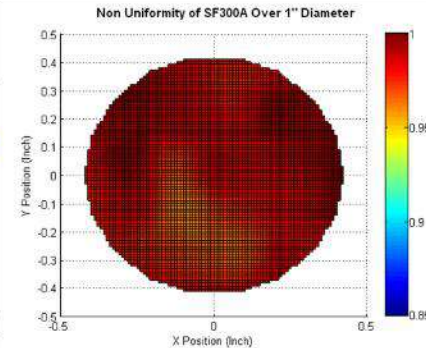

# Solar Simulators

# Solar Simulator Guidelines and principles

## Characteristics 'simulated' from a Solar Simulator

- 1) Spectral match
- 2) Spatian non-uniformity
- 3) Temporal instability
- 4) Power/Irradiance at the target of illumination
- 5) Collimation angle of the output beam

Watch our webinar for an overview of the guidelines and principles behind Solar Simulators.

Link: <https://youtu.be/YOf2N9gMum0>

# Main Standards for Solar Simulation

Sciencetech Solar Simulators reproduce the sun's irradiance according to:

- ASTM E927 - Specification for Solar Simulation for Photovoltaic Testing
- IEC 60904-9 - Solar Simulator performance requirements
- JIS C 8912 - Solar simulators for crystalline solar cells and modules
- JIS C 8933 - Solar Simulators For Amorphous Solar Cells
- JIS C8942 Solar Simulator for Multi-junction solar cells and modules
- IEC 61215 - Crystalline silicon terrestrial photovoltaic (PV) modules - Design qualification and type approval
- IEC 61646 - Thin-film terrestrial photovoltaic (PV) modules - Design qualification and type approval
- US Military Standard MIL-STD810 H\_Method 505.7 For Solar Radiation (Sunshine)
- DIN 75220 - Ageing of Automotive Components in Solar Simulation Units
- COLIPA/ ISO24443 and ISO24443 for dermatological, cosmetic and sunscreen testing

# Applications of Solar Simulators

## Why use a solar simulator?

- Provides effective, repeatable and controllable outdoor conditions inside laboratories to test,
  - Performance of power plants
  - Develop new photovoltaic technologies
  - Research work conducted with solar energy
  - Material testing for weathering
  - Simulate extraterrestrial conditions

Sunscreen testing with a UV solar simulator

Link: <https://youtu.be/V-MTEfkFP9I>

# Small Area Solar Simulators

SF-Series

- Up to class AAA
- Target size up to 50 mm diameter
- One sun irradiance

SciSun

- Class AAA
- Target size 50 mm × 50 mm
- Up to two sun irradiance

Available Air Mass filters include AM0, AM1.0, AM1.5G (more options available upon request)

# Medium Area Solar Simulators

## Fully Reflective Solar Simulators

- Class AAA Solar Simulation
- Provides a well collimated light output
- Ideal for applications requiring higher UV output
- No refractive optics and free of chromatic aberration

## SL Series

- Class AAA Solar Simulation
- Target size up to 60 mm × 60 mm
- Provides up to two sun irradiance
- Comes with a workstation ideal for PV cell testing.

# Medium Area Solar Simulators

## Ultra High Efficiency (UHE)

- Class AAA Solar Simulation
- Environmentally friendly operation.
- Target size up to 30 cm × 30 cm

Watch our product demonstration video for ultra high efficiency solar simulator (UHE-NL-150) with I-V testing equipment

Link: <https://youtu.be/A0oS70Dn5sQ>

# Large Area Solar Simulators

## Large Area Solar Simulators

- Variable illumination areas up to 5mx5m
- Class AAA solar simulation
- AM0, AM1.5G or other specialty spectral matches
- Various degrees of collimation, depending on customer requirements

## LED Solar Simulators

- Customizable large LED solar simulators available upon request
- Spectrally adjustable, ideal for multi junction PV testing
- Stepwise / continuous irradiance attenuations

# Highly Collimated Solar Simulators

## Highly Collimated Solar Simulators

- Highly collimated,  $0.7^\circ$  collimation half angle
- AM0, AM1.5G or other specialty spectral matches
- Up to class ABA
- Target size up to 30 cm diameter
- Fresnel lenses are used as optics to provide highly collimated light output

Solar Simulator. Highly Collimated Solar Simulators  
Link: [https://youtu.be/BsR\\_j12i4sw](https://youtu.be/BsR_j12i4sw)

# Fiber Optic Output Solar Simulators

## Lightline Solar Simulators

- Fiber optic output for flexible illumination
- Up to class AAA solar simulation
- Up to 50mm × 50mm
- Up to 9 suns irradiance on target plane
- Collimated or focused beam outputs available
- AM1.0D, AM1.5G, AM1.5D, AM2.0 and other specialty spectral filters available
- Integrate with glove boxes, vacuum chambers & other specialty sample chambers

# Flash Solar Simulators

Large Area Flash  
Solar Simulators

- Class AAA
- Target Size: up to 2 m × 2 m
- Uses a heavy duty xenon flash lamp
- Pulse duration: 0.5 – 2.5 ms

Concentrated Flash  
Solar Simulators

- Class AAA
- Target size: 5 cm × 5 cm
- Ultra high intensity, up to 4000 suns

SCIENCETECH

# Solar Cell Testing and Characterization

# High Quality I-V Measurement System (SSIIVT)

The SSIIVT is a complete electrical current-voltage (I-V) measurement system used to characterize photovoltaic cell performance. The I-V Measurement System includes:

- Keithley 2400 series SMU
- Sciencetech SciPV:IV Software for Windows
- RS232 to USB dongle
- SCI BI 100 load boost module (Model SSIIVT-2KC)

## Standards

- IEC 60891. Assessment - Photovoltaic devices – Procedures for temperature and irradiance corrections to measured I-V characteristics
- ASTM E948. Standard Test Method for Electrical Performance of Photovoltaic Cells Using Reference Cells Under Simulated Sunlight.

# High Quality QE Measurement System

- Spectral Response : 250 - 2500 nm
- IV Measurements
- Internal and External Quantum Efficiency
- Reflectance and transmittance measurements
- Induced Voltage (IV) :  $V_{OC}$  ,  $I_{SC}$  ,  $R_{shunt}$  ,  $P_{max}$  , efficiency %, and fill factor
- Monochromatic light power up to 125 mW
- Bias light : class AAA solar simulator included
- Keithley 2400 series source meter
- Stanford SR800 series lock-in amplifier
- Designed for compliance with ASTM E1021, ASTM E948, IEC 60904-8, IEC 60904-1
- AC/DC Mode option available

SCIENCETECH

# Optical Spectroscopy Systems

# Tunable Light Sources

## Introduction to Sciencetech TLS

- Produces monochromatic light from 300 nm to 1800 nm.
- Optical resolution from 20 nm to 0.2 nm.
- Xenon or QTH lamp.
- Collimated light output is standard.
- Condensed or coupled output light can be provided.
- Sciencetech's software, Sci-Spec, controls all components of the system

Product Demonstration video

Double additive/subtractive and triple monochromators are available!

	9030	9072	9010	9055	9057	9040	9490	9150
Focal Length (mm)	100	125	200	250	457	550	1000	1500
F/#	3.2	3.5	3.5	3.5	8	6.9	13	12
Grating Size*	S (32 × 32)	T (30 × 30)	D (50 × 50)	T (50 × 50)	T (50 × 50)	T (64 × 64)	T (64 × 64)	S (110 × 110)
Resolution (nm) **	1	0.4	0.4	0.2	0.2	0.03	0.017	0.013

\*S for single, D for double, T for triple, grating size mm × mm

\*\* Available for gratings with 1200/mm

# Far Infrared Fourier-Transform Spectrometer

## SPS-300

- Modified Michelson (Martin-Puplett) interferometer, vacuum compatible, helium-cooled bolometer
- Operates in the far infrared or THz spectral region (from 5  $\mu\text{m}$  to 5000  $\mu\text{m}$ , 0.06 to 60 THz or 2  $\text{cm}^{-1}$  to 2000  $\text{cm}^{-1}$  )

# Far Infrared Fourier-Transform Spectrometer

ESA used Sciencetech's SPS-200\* to calibrate the detectors for its Planck satellite, allowing the telescopes to analyze the infrared radiation remaining from the Big Bang

\*SPS-200 is a precursor to the Sciencetech's current SPS-300

# LIBS and LAMIS for Planetary Exploration

The LBEISS system combines Laser Induced Breakdown Spectroscopic (LIBS) system and a Laser Ablation Molecular Isotopic Spectroscopy (LAMIS), both based on the spectra seen when a targeted sample is vaporized by a high energy laser pulse.

*"This project is undertaken with the financial support of the Canadian Space Agency."*

# Spot-Focused Image Furnace for Ultra-High Temperature Oxidation Studies

Screw melts in 30 seconds with only 20% power

- Four 6.5 kW Xenon Arc Lamps
- Target size 5 cm diameter
- More than 10 kW optical power at target plane
- More than 5,000 suns

# High Depth of Field IR Solar Simulator

- Target Area 1m × 1m :  $\pm 5\%$  Non-uniformity.
- Target Area 1.5m × 1.5m :  $\pm 30\%$  Non-uniformity.
- Spectral match : ASTM Class A in 700 nm – 1000 nm.
- Power and uniformity maintained over 30 cm depth.
- Application: 3D camera testing.

# Highly-Collimated Solar Simulator for Space-Related Research

## PROJECT

# HIGHLY COLLIMATED

## SOLAR SIMULATOR

With automated beam angle movement.  
Developed for a prominent national  
space agency.

- Class AAA
- Highly collimated output :  $0.35^\circ$  half angle collimation
- AM0 spectral match
- 5-axis automated movement
- Continuous attenuation from 0.01-1 sun
- ISO7 cleanroom compliance

# UV Solar Simulator for Air-pollution Studies in the Upper Atmosphere

## PROJECT

# UPPER ATMOSPHERE SOLAR SIMULATOR

For photochemistry in air pollution studies. Produces solar spectrum found in the upper atmosphere

- Illuminates a rotating cylindrical drum designed to hold aerosols in suspension.
- 0.5 m<sup>2</sup> target area
- Collimation of 1° half angle.
- AMO spectral match
- Variable attenuation from 0.25- 1 sun.
- The system was designed to fit within a room of dimensions 3m x 5m x 2.5m
- Constant temperature regulation of the system to maintain at 25 ° C

# Large Area QTH Solar Simulator

- Solar Simulator consisted of Eight 2kW QTH sources
- Target area : 1.5m x 1.5m
- Wavelength range : 700-1100 nm (AM1.5G, 1 sun irradiance)
- Temporal Instability :  $\pm 5\%$ .
- Irradiance attenuation adjustable between 0.1-1 sun

Thank you and please contact us for your future  
optical spectroscopy and solar simulator needs!
